

Rebrand and republish, 19 September 2026

Change Record v1

Prepared for	Callum Page and Max Jones
Prepared by	Claude, in the Claude Code session for repository xrcallum/King-laundry-
Date	19 September 2026 (AEST)
Scope	Everything changed in this session: the live site, the Git repository, the Complete Project Dossier, the domain check, and what remains open.
Companion	LLG-GOV00-01_Complete Dossier_v3 (136 pages). This record says what changed; the dossier is the full picture.
Proposed filing	MAXCAL Laundrylegends > GOV00 > LLG-GOV00-02_Change Record_v1 (code is an assumption; confirm against the artefact register)

1. What is live right now

Thing	Where	State
Laundrylegends site (marketing, customer app, ops backend, operator portal)	https://claude.ai/artifact/5QptppvdarNfZyVYBFpyy3	Live Published with capabilities {"db": {}, "user": {}}, contract 0.2.52, icon crown. Bookings, pricing and ops screens work because the database capability is declared.
Source of record	github.com/xrcallum/King-laundry- · branch claude/push-latest-chats-live-xnijoo	Pushed PR #3 merged. Commit ac4595a (site rebrand) and bd72d69 (dossier, tooling, README). This record and the domain corrections are the commit after bd72d69.
Site file	site/laundrylegends-site.html	SHA-256 63a2957c0d717fadab3faa7475aa8db78ffd25eb5ec397e65bd5aec2f01a5afa (unchanged in this follow-up; the live artefact matches it).
Complete Project Dossier	dossier/LLG-GOV00-01_Complete Dossier_v3.pdf	Rebuilt 136 pages. Cover, header and footer read Laundrylegends. D-09 now carries the verified post-rebrand domain findings.
Older artefacts titled "LaundryKings"	Two in the shared artefact list	Your call Left untouched. They are older, less complete snapshots; deleting them needs your explicit yes.

2. Every change, by file

File	Change	Why
<code>site/laundrylegends-site.html</code>	Renamed from laundrykings-site.html. LaundryKings → Laundrylegends, LAUNDRYKINGS → LAUNDRYLEGENDS, Kings Club → Legends Club, KING REWARDS → LEGENDS REWARDS, LK- prefixes (monograms, referral codes, console tags) → LL-, default fallback 'KING' → 'GUEST'. Two gaps found on a second pass: the nav link Kings Club (the entity broke the literal match) and the third subscription tier plan('King', ...) → plan('Legend', ...).	Your instruction: rid the site of "Kings" completely. Verified by verify/preflight.py and verify/collide.js, both PASS, before publish.
<code>site/brand/laundrylegends-hero-clean.jpg</code> <code>site/brand/laundrylegends-hero-original.jpg</code>	Renamed from laundrykings-hero-*.jpg. Not referenced by the live site; referenced by tools/clean_hero.py and Appendix E, both updated.	No file in the repo should carry the old name.
<code>dossier/00_head.html</code>	Title and cover to Laundrylegends and Revision 3. Cover crown was split across two spans (KINGS) and missed the first pass; fixed. Live artefact URL and SHA-256 corrected (v2 pointed at an unrelated marketing-site link).	The cover must identify the document it is.
<code>dossier/01_parts0_3.html ... 07_appendixE.html</code>	Brand words and file paths renamed. Filing codes LKG → LLG. D-09, Part 0 finding 3, the risk register R3, the M2 milestone text, Appendix A's verification table and Appendix D's fact-check table now state the post-rebrand domain findings (section 3 below). The quoted Linear issue title for KEA-11 keeps "laundrykings.com.au" because that is what the issue actually says.	A rename must not turn a verified fact about one name into an unverified claim about another. The first pass did that in four rows; this pass replaced them with a real check.
<code>dossier/build.py</code>	pypdf → pymupdf for page-number extraction; header, footer and title to Laundrylegends v3.	pypdf's cryptography binding panics in the build container; the README's rebuild command now works.
<code>dossier/LLG-GOV00-01_Complete_Dossier_v3.{html,pdf}</code>	New build output. The v2 (LKG) files are removed from the repo; Git history keeps them.	One live version; superseded goes to history.
<code>tools/*.py</code>	Historical embedded HTML/JS snippets in clean_hero, content_update, fix_boot, icons, phase_b, phase_c rebranded.	Repo-wide consistency; a grep for the old name should return only the repository's own name.
<code>README.md</code>	Live artefact URL, v3 filenames, filing note, domain result, and this record.	The README is where the next session starts.

3. Domain check, verified 19 September 2026 after the rebrand

Domain	Vercel	DNS	Price (USD, per year)	Read
laundrylegends.com.au	Not available	Resolves: 15.197.148.33, 3.33.130.190	—	Registered to a third party. What it serves is unverified (HTTP 403 through the build proxy).
laundrylegends.com	Not available	Resolves: 103.224.182.245	—	Registered to a third party. Same caveat.
laundrylegends.au	Available	No record	23.99, renews 23.99	Buyable today. Needs Australian presence only, no ABN.
laundrylegends.co	Available	No record	29.99, renews 24.80	Defensive redirect only.

Decision D-09 · Owner Max with Callum · by 25 September 2026

- (Recommended)** Launch on **laundrylegends.au**. Available now, cheapest, no wait on the ABN (D-03). Register in the entity's name once D-03 lands; point at Vercel; update the site's `og:image`, `twitter:image` and the referral share link (`#apShareLink`), which still hard-code `laundrylegends.com.au`.
- Also take `laundrylegends.co` as a redirect. Low value; skip if budget matters.
- Approach the `.com.au` holder. Slow, uncertain, holder unknown; only if a `.com.au` becomes essential for a channel.

Nothing is bought without a principal's written yes in chat. The Vercel connector can purchase, so the instruction must be explicit.

4. Still open, with owners

Item	Owner · date	What unblocks it
Retire the two old "LaundryKings" artefacts	Callum · when convenient	Say "delete the two LaundryKings artefacts" in a chat. They will be listed back to you first, then removed.
D-09 domain	Max with Callum · 25 Sep	Pick option 1, 2 or 3 above. Then the OG/share URLs in the site get changed and republished in the same session.
Filing prefix LLG	Max · 25 Sep	Confirm LLG (or another prefix) against the Maxcal artefact register. If it changes, the two dossier files are renamed and rebuilt; nothing else moves.
"Linen Legends" artefact	Callum · when convenient	Unopened. Say whether it belongs to this venture or another; if another, it stays out of this repo by the cross-venture rule.

Item	Owner · date	What unblocks it
Standalone operator portal	Callum · scope first	The site already carries the operator/ops screens (routes #/ops, #/opsbook, the operator portal added in commit d755893). If you want a separately published portal, say so and it becomes its own scoped piece of work with its own preflight.
Everything in the dossier's Part 16 decisions (D-01 to D-14)	As listed there	Unchanged by this session. D-09 is the only one this record touches.

5. How to continue this in any new chat

Paste the block below as the first message of a new chat. It gives the session the repository, the live URL, the rules that travel with the code, and what is open, so nothing is re-derived and the old name never comes back.

Venture: Laundrylegends (MAXCAL | Laundrylegends). The name is Laundrylegends. Never LaundryKings, Kings Club or King anything; the repo name xrcallum/King-laundry- is the only place the old word remains.

Source of record: GitHub xrcallum/King-laundry-, branch claude/push-latest-chats-live-xnijoo. Site file: site/laundrylegends-site.html (one self-contained HTML file: marketing, customer app, ops backend, operator portal). Read README.md first; it holds the publish workflow.

Live site: <https://claude.ai/artifact/5QptppvdarNfZyVYBFpyy3> – republish only to this URL, with capabilities {"db":{}},"user":{}}}, contract 0.2.52, icon crown, never mcp. Before any publish: python3 verify/preflight.py and node verify/collide.js must both print RESULT: PASS, and the change must be committed first.

Documents: dossier/LLG-GOV00-01_Complete Dossier_v3.pdf (full picture, 136 pages) and dossier/LLG-GOV00-02_Change Record_v1.pdf (what changed on 19 Sep 2026 and what is open). Rebuild command is in README.md.

Open decisions: D-09 domain (laundrylegends.au recommended; .com.au and .com are taken), filing prefix LLG to confirm, two old "LaundryKings" artefacts to retire on explicit instruction, "Linen Legends" artefact unidentified. Pricing lives in the database document config/pricing; never hard-code it. Every price shown is GST-inclusive AUD.

Task for this chat: [write it here]

6. Verification performed this session

- verify/preflight.py on the site file: RESULT: PASS (IDs, script parse, emoji census, undefined functions).
- verify/collide.js at phone widths: RESULT: PASS (sticky pill, chat button, tab bar, assistant panel).
- Residual-name scan across every touched file and the full text of the rebuilt PDF: zero genuine hits. The scan was rewritten mid-session after a fixed-width context pattern missed three real occurrences near line ends; the corrected scan extracts variable-length context.
- Cover page of the v3 PDF rendered to an image and checked by eye: title, revision, live URL and SHA-256 correct.

- Domain check: Vercel bulk availability plus DNS resolution from the build container, both on 19 September 2026; TLD prices from Vercel. Recorded in section 3 with the one thing that could not be verified named as such.

Legal, tax and structuring points in the dossier remain options for the adviser, not advice. This record adds none.
